

Class 10th: AI Literacy & Personal Productivity

Goal: Understand the market landscape, select models, and map out tools to supercharge daily tasks.

Phase 1: Landscape Launchpad (Classes 1-5)

Focus: Demystifying AI, interfaces, ecosystem differences, and structural prompt design.

Session	Topic	Core Learning Objectives & Details
Class 1	Introduction to the Generative AI Era	What are LLMs? Mindset shift from 'Googling' to 'Collaborating'.
Class 2	Chatbots vs. The Cloud	Moving from simple browser chats to cloud-based AI work environments (Claude, ChatGPT, Gemini).
Class 3	Navigating Ecosystems	Comparing Claude's nuanced writing/reasoning, GPT's tool suite, and Gemini's multi-modality. Why we pick Claude for deep knowledge work.
Class 4	Structural Prompting Syntax 101	Setting the Role, Context, Task, and Constraints (RCTC framework).
Class 5	Avoiding Hallucinations	Grounding the model using specific source guardrails and custom instruction styling.

Phase 2: Accelerated Workflows (Classes 6-15)

Focus: Research, web-connected routines, and handling large academic documents in the cloud.

Session	Topic	Core Learning Objectives & Details
Class 6	The Power of Context Windows	Understanding 'tokens' and how cloud memory handles vast amounts of text.
Class 7	Uploading and Synthesizing Data	Processing dense textbooks or multi-page PDF research datasets in seconds.
Class 8	Web-Connected Deep Dives	Combining AI reasoning with live search routines for real-time market/academic research.
Class 9	Interactive Study Guides	Turning complex chapters into personalized quizzes and flashcard frameworks.
Class 10	Writing & Editing Co-Pilot	Using AI to outline, refine, structuralize, and proofread essays without losing your own voice.
Class 11	Quantitative Problem Solving	Breaking down math, physics, or finance word problems step-by-step.
Class 12	Multimodal Inputs	Uploading images, charts, and handwritten diagrams for visual data interpretation.
Class 13	Time Management & Scheduling	Planning calendar blocks, study routines, and optimizing weekly productivity.
Class 14	Project Ideation & Brainstorming	Rapidly generating ideas for school presentations, clubs, or business concepts.
Class 15	Review & Project Pitch	Presenting a personal productivity blueprint built during this phase.

Phase 3: No-Code Creation (Classes 16-25)

Focus: Leveraging interactive browser sandboxes and UI execution environments.

Session	Topic	Core Learning Objectives & Details
Class 16	Introduction to Claude Artifacts	What is a sandbox environment and how does text-to-code execution work?
Class 17	Designing Interactive Calculators	Building custom visual calculators (e.g., GPA calculator, physics formula tester) via simple text commands.
Class 18	Visualizing Data Dashboards	Creating interactive charts and graphs from raw CSV data.
Class 19	Building Custom Flashcard Apps	Designing an interactive, functional web-based app for exam preparation.
Class 20	Logic Spaces & Rules	Teaching the AI how to wire backend logic loops using basic user feedback.
Class 21	UI/UX Refinement	Iterating on colors, layout, and visual presentation using descriptive text commands.
Class 22	Gamified Learning Apps	Creating a text-based adventure game or dynamic quiz app inside the Artifact window.
Class 23	Debugging in Real-Time	Reading error outputs and commanding the AI to fix broken code modules within the sandbox.
Class 24	Sharing and Porting Artifacts	Exporting no-code projects to standard HTML/JS web files.
Class 25	Phase 3 Showcase	Students demo their interactive no-code micro-apps.

Phase 4: Capstone Dashboard (Classes 26-35)

Focus: Merging everything into a single, comprehensive personal productivity command center.

Session	Topic	Core Learning Objectives & Details
Class 26	Designing the Architecture	Planning a multi-functional personal student layout organizational dashboard.
Class 27	Integrating the Study Core	Building the task and syllabus tracker components.
Class 28	Integrating the Research Hub	Embedding reference structures and dynamic summary blocks.
Class 29	Adding the Quick Tools	Integrating custom interactive calculators built in Phase 3.
Class 30	Descriptive Text Iteration	Polishing the dashboard's look, layout, and cross-functional linkages.
Class 31	Stress-Testing the System	Injecting real data to see how the cloud dashboard performs under pressure.
Class 32	Optimizing Layout & Accessibility	Ensuring the design is intuitive and lightning-fast.
Class 33	Capstone Refinement Day	Dedicated workshop day for 1-on-1 dashboard customization.
Class 34	Final Cloud Deploy	Packaging and publishing the digital workspace.
Class 35	Capstone Exhibition Gala	Presentation of the ultimate personal productivity dashboards.
